ABHAY NAVALE

Full Stack .NET / Angular Developer

navale.abhay12@gmail.com | 9075966080 | Pune, Maharashtra | navaleabhay.github.io | linkedin.com/in/navale-abhay | github.com/NavaleAbhay

PROFESSIONAL SUMMARY

Software Engineer with 3 years of experience building enterprise applications on the .NET Core / C# / SQL Server stack, with hands-on Angular and TypeScript experience from building and deploying DairyOps, a live production ERP.

Proven track record designing REST APIs, secure data integrations, and microservices for large clients (State Bank of India, Mahindra & Mahindra, Reliance Industries), plus hands-on SQL Server performance tuning and production debugging.

Strong on clean code, end-to-end ownership of features from requirement analysis through deployment, and closing out high-severity production issues under tight timelines.

TECHNICAL SKILLS

Languages: C#, Java, TypeScript, JavaScript, VB.NET, SQL

Frontend: Angular, TypeScript, RxJS, NgRx, Capacitor, PWA, Offline-First Apps, jQuery, AJAX, HTML/CSS, Responsive UI

Backend: .NET 8, .NET Core, .NET Framework, ASP.NET MVC, ASP.NET Web API, Node.js, NestJS, SignalR, Windows Services, Background Services (IHostedService), RESTful APIs, Microservices, Repository Pattern, Transactional Outbox Pattern, Event-Driven Architecture, Clean & Monolithic Architecture, LINQ, JWT / Token-based Authentication, Firebase Cloud Messaging, SOLID Principles & Design Patterns

Databases & ORMs: SQL Server, PostgreSQL, MySQL, SQLite, IndexedDB (Dexie.js), T-SQL (Stored Procedures, Triggers, Functions), Entity Framework Core, ADO.NET, Database Design & Normalization

Cloud & DevOps: AWS Lightsail & EC2, Linux, Nginx, SSL, CI/CD Deployment Scripts (PowerShell), Docker (fundamentals), GitHub Actions (basics)

Tools & Practices: Git, GitHub, Postman, Swagger, Visual Studio, VS Code, xUnit, NUnit, Agile/Scrum, GitHub Copilot, Antigravity, Cursor

PROFESSIONAL EXPERIENCE

Dot Net Developer — Webito Infotech Private Limited, Navi Mumbai — Nov 2025 – Present

Clients: State Bank of India (SBI, HRMS Dept), Reliance Industries Limited

- **Architected** a Loan Management & Employee Life Cycle module from the ground up using .NET Core, Microservices, and SQL Server, as measured by digitizing workflows for **1 lakh+ employees** and roughly **3,000 loan applications processed per month**, by replacing a manual, paper-based workflow with a fully digital multi-level approval system.
- **Engineered** API integrations connecting internal loan workflows to external review and submission systems, as measured by cutting application turnaround time by roughly **30%**, by building multi-level approval routing across systems.
- **Strengthened** data security for APIs handling sensitive employee information, as measured by passing Information Security Department (ISD) audits with **zero repeat critical findings**, by implementing encryption and decryption protocols end-to-end.
- **Improved** reliability of third-party API integrations, as measured by cutting unhandled failures in production by roughly **25%**, by designing structured test cases and detailed success/failure logging.
- **Optimized** SQL Server database performance, as measured by cutting average query execution time by roughly **40%** (from ~5 seconds to ~3 seconds on key reports), by applying normalization and denormalization techniques based on access patterns.
- **Resolved 15+** critical vulnerabilities and production bugs flagged during strict ISD testing, as measured by zero repeat findings in the following audit cycle, by owning full-lifecycle debugging and writing complex stored procedures for the fixes.

Software Engineer — Emsphere Technologies Private Limited, Pune — Nov 2023 – Nov 2025

Clients: Mahindra and Mahindra, Nayara Energy

- **Built** core modules of a Contract Labour Management System (CLMS), as measured by cutting employee onboarding time by roughly **35%**, by designing a multi-level configurable onboarding workflow in .NET Framework MVC using the **Repository Pattern** to keep data access clean, testable, and decoupled from business logic.
- **Engineered** a centralized Authentication Gateway in .NET Core powering a single unified mobile app for all enterprise clients, as measured by authenticating and correctly routing **10+ enterprise clients** to their own dedicated servers, by validating users via

company code and credentials and dynamically redirecting each client from a shared centralized routing database to its own designated backend server.

- **Automated** attendance tracking for department heads, as measured by eliminating roughly **5 hours per week** of manual monitoring per department, by building an **event-driven** Windows Service that detects shift-timing events in real time and triggers automated email notifications.
- **Improved** backend data processing speed for enterprise-scale workloads, as measured by roughly **30% faster** processing time, by optimizing SQL Server queries and refactoring inefficient backend logic.
- **Maintained** and enhanced production enterprise applications, as measured by cutting reopened tickets by roughly **20%**, by delivering consistent fixes and improvements within a .NET Framework MVC / SQL Server / jQuery monolithic architecture.

PROJECTS

DairyOps — Offline-First Dairy ERP & Mobile Platform | dairyops.app **2026 – Present**

Personal project, live in production at Shivaar Farms | Angular, TypeScript, Capacitor, SQLite, Dexie.js, .NET 8 Web API, PostgreSQL, Nginx, AWS Lightsail

- **Built** and launched a dairy ERP and mobile milk collection app that works offline, as measured by running live in production at Shivaar Farms, by developing the full stack with Angular, .NET 8 Web API, and PostgreSQL.
- **Reduced** milk collection time per farmer from **~45 seconds to 3 seconds**, by building a fast, simple mobile app in Angular and Capacitor for recording milk collection.
- **Prevented** data loss in areas with poor network, as measured by **zero lost entries** during network outages, by saving every entry on the device first (SQLite on Android, IndexedDB on web) and syncing it to the server when the internet returns, without creating duplicate records.
- **Automated** background tasks like Firebase push notifications, license handling, and cleanup of old sync data, by building a Clean Architecture .NET 8 Web API with background services.
- **Deployed** DairyOps and the Shivaar Farms website together on a single AWS Lightsail server, as measured by both sites running live with SSL, by using Nginx to serve each domain separately and writing PowerShell scripts to automate deployment.

EDUCATION

Bachelor of Computer Science (BCS), Savitribai Phule Pune University, Pune 2019 – 2022

LANGUAGES

English, Hindi, Marathi
